1. Creating artifact from IntelliJ:

- Go to project structure:
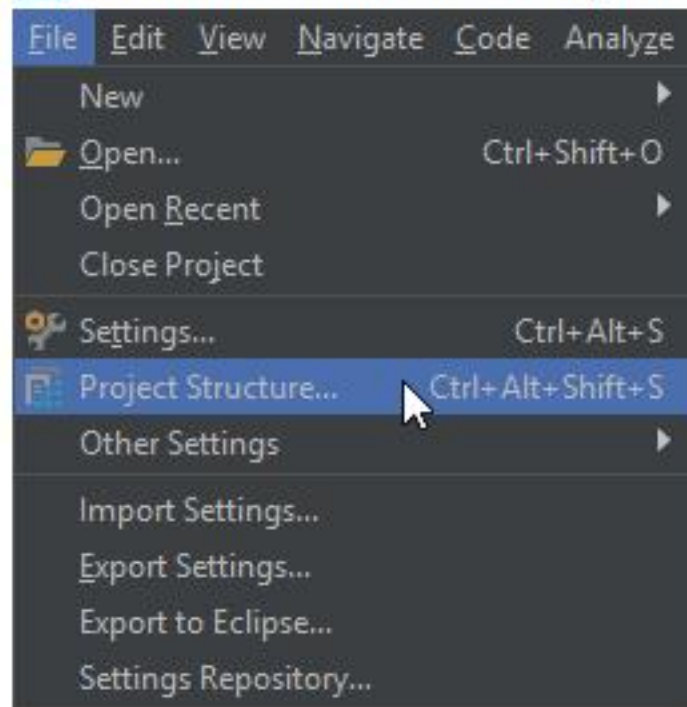

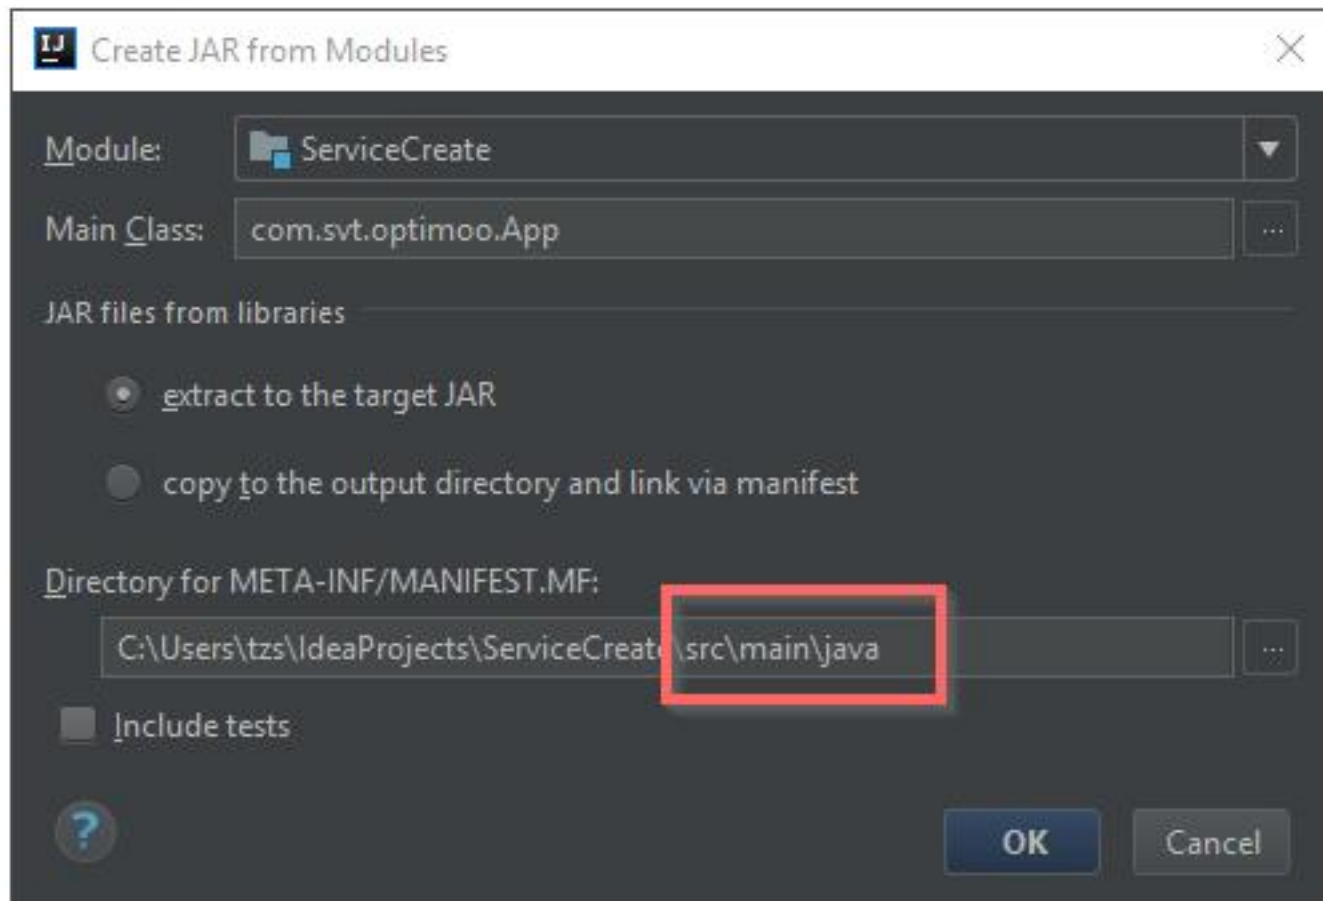

- Create a new artifact:
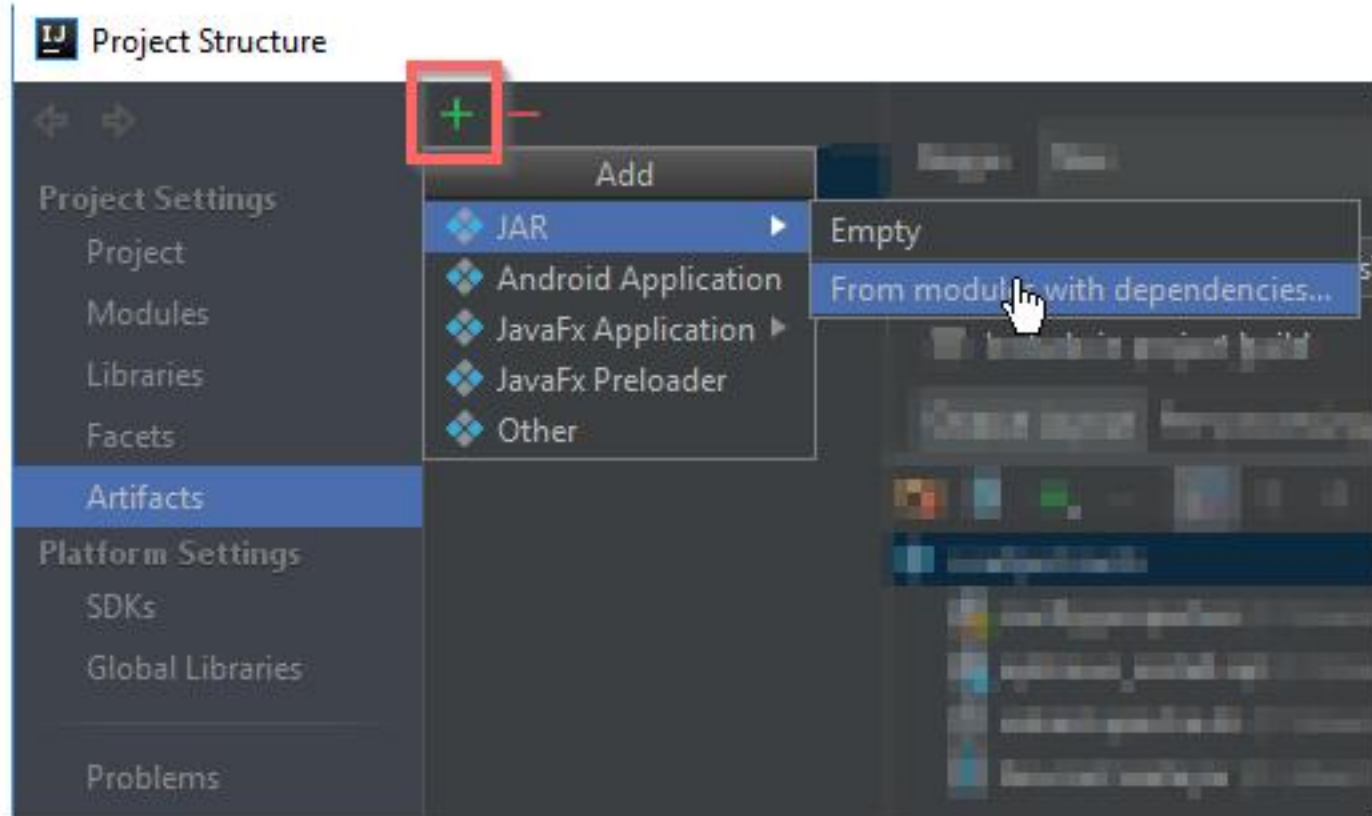

- Select the main class, and be sure to change the manifest folder:

IJ Create JAR from Modules   ✕

Module: ▣ ServiceCreate   ▼

Main Class: com.svt.optimoo.App   ...

JAR files from libraries

      ⦿ extract to the target JAR

      ○ copy to the output directory and link via manifest

Directory for META-INF/MANIFEST.MF:

C:\Users\tzs\IdeaProjects\ServiceCreate\src\main\java   ...

☐ Include tests

?   OK   Cancel
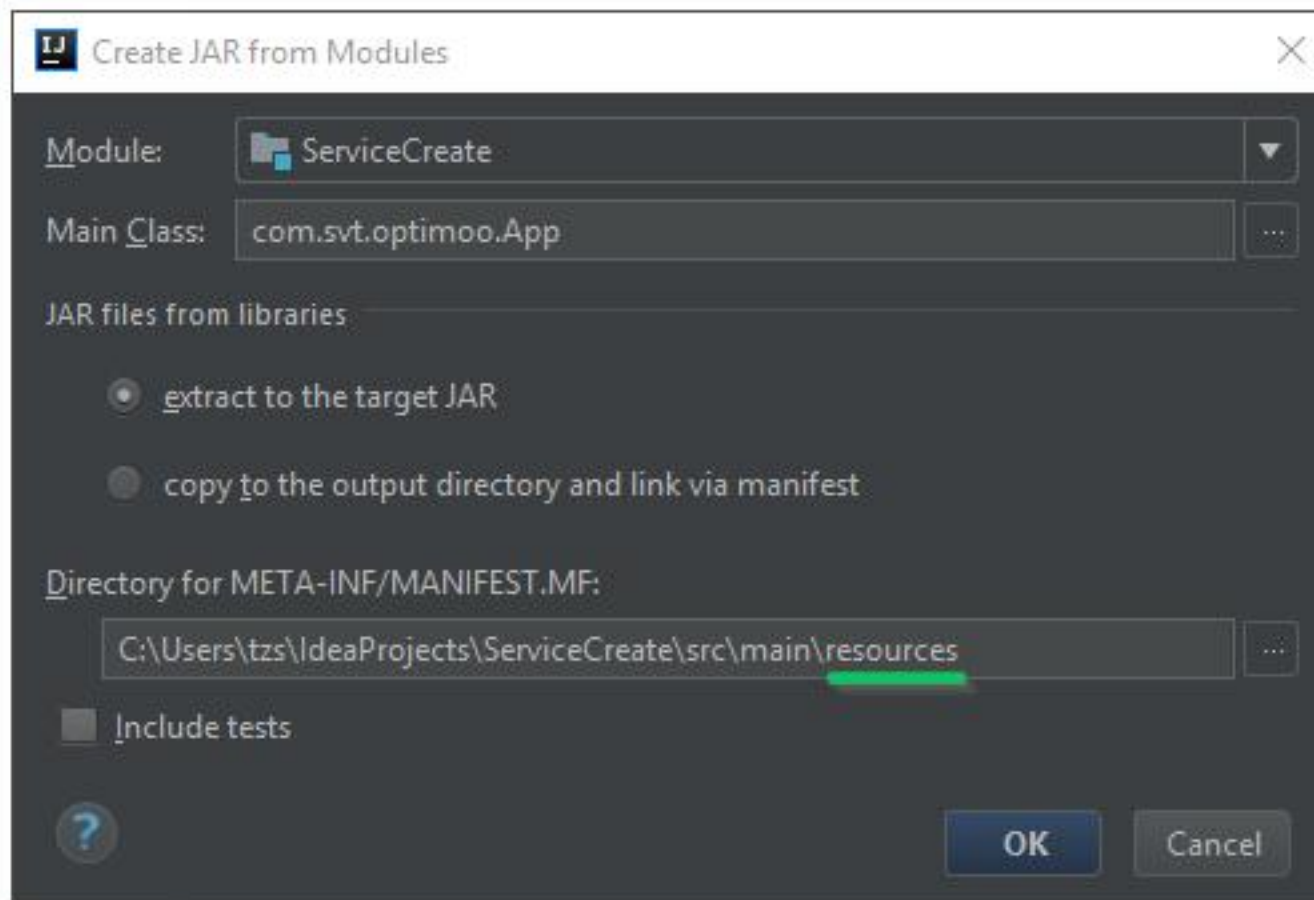

You have to change manifest directory:

```
<project folder>\src\main\java
```

replace "java" with "resources"

```
<project folder>\src\main\resources
```

This is how it should look like:

- Then you choose the dependencies what you want to be packed IN your jar, or NEAR your jar file

- To build your artifact go to build artifacts and choose "rebuild". It will create an "out" folder with your jar file and its dependencies.

eate] - service_create - IntelliJ IDEA 2017.2
